NATIVE PLANT SOCIETY

*Dedicated to the study,
conservation, cultivation,
and restoration
of North America's
native flora*

The W5 of Native Plant Gardening

WHO are native plant gardeners? We are people of all ages and walks of life who are trying to create the biodiversity necessary for a healthy environment in our cities, suburbs and countryside. We love gardening, we respect the needs of the birds and insects that pollinate our plants and we have discovered how rewarding it is to grow native plants successfully.

WHAT are native plants? They are the wildflowers, grasses, ferns, vines, shrubs and trees that were growing here before European settlers arrived, bringing seeds from 'home'. Native plants are the plants our native birds, bees and other pollinators generally prefer. The ones that 'fit' in our local ecosystem. If you would like to grow some in your own garden, start with something simple like bee balm, black-eyed Susan, butterfly milkweed, evening primrose, prairie smoke, wild geranium or one of the wild roses. These will grow almost anywhere except in full shade.

For shady areas, try Virginia bluebells, Dutchman's breeches, false Solomon's seal, foamflower, mayapple and wild ginger. Native ferns and sedges are great too.

Small native trees for city gardens include Canada plum, pin cherry and pagoda (or alternate-leaf) dogwood. Shrubs include red osier dogwood, nannyberry and serviceberry.

WHERE can I plant them?

- In any garden, even among your non-natives
- Dig up some lawn and create a new native plant bed
- Look for an unused corner that needs brightening
- At the cottage
- In containers on your balcony or patio

WHEN should I plant them? You can plant many natives as soon as the soil can be worked easily, then continue all summer and fall. Be sure to water your transplants regularly until they adapt to their new surroundings. This should take about one growing season.

WHY should I grow native plants?

- To provide food, shelter and pollen for our native birds, bees, butterflies, etc.
- Because they are easy to grow and seldom need watering, pruning or spraying
- To reconnect yourself to nature
- And, because they are so beautiful!
